

LINC was recently awarded business with General Motors for offsite Sequencing and managing a Logistics Optimization Center (LOC) for their Pontiac, MI Assembly Center (PAC). LINC has begun operating a Central Material Area (CMA) out of a temporary facility while a new facility is under construction. Ground has been broken for the building of a 300,000 square foot facility, directly across the street from the PAC and adjacent to our existing Deconsolidation and Container Management Center (CMC) for this GM Plant. The target completion date for LINC's new facility, which will house the CMA, Deconsolidation and CMC operations, is November 2006.

LINC will take over the Sequencing operation for the PAC in July, 2006 and this will be housed in an existing facility. Additionally, LINC will be providing Sub Assembly and Bulk Commodities services out of the Sequencing Center for the PAC. LINC has proven to be able to acquire properties and develop value added operations within a limited timeframe to meet our Customer's expectations.
